1 Introduction

1.1 Overview

- 1.1.1 This additional evidence is submitted on behalf of BDW Trading Ltd which is promoting land at New Line Learning Academy, Boughton Lane (site H1(29)), an allocation site within the Maidstone Local Plan 2011-2031.
- 1.1.2 The site has consistently featured in emerging drafts of the Local Plan as a preferred location for housing and as such it is underpinned by a comprehensive evidence base to show that it is deliverable. Accordingly, it represents a core component of the Council's housing land supply.
- 1.1.3 Notwithstanding our client's support for the continued allocation H1 (29), we consider there to be significant flaws associates to the wider housing strategy that results in a clear need to identify additional sites. We expand upon the evidence for this within this statement specifically responding to the questions of the Inspector.

1.2 Scope of Representations

- 1.2.1 Maidstone Borough Council (MBC) has submitted its Local Plan and associated documentation for Independent Examination. An Examination Programme has been published, which divides the hearings into various sections over six weeklong sessions. The first tranche of hearings will be held in October 2015 and will address issues of national policy consistency, housing land supply and other strategic borough-wide policy issues. The subsequent parts, to be heard in November and December 2016, will consider site-specific allocations and more generic planning issues.
- 1.2.2 This statement constitutes BDW Trading Ltd's formal response to questions raised by the Inspector in regards to Matter 5A in respect of housing supply. A separate submission will be made in respect of Matter 6B and any other areas where further evidence is necessary.

2 Response to The Inspector's Questions

2.1 Overview of Evidence

- 2.1.1 The Inspector has raised ten questions in respect of matters relating to Housing Supply. Whilst the majority of these questions are directed to the Council, we also take the opportunity to respond where we feel can add to the discussion and assist the Examination. Furthermore, in order to aid the Inspector, we append, as evidence, our own independent critique of the Council's housing land supply evidence included within the Housing Topic Paper (2016).
- 2.1.2 This evidence highlights in detail why there are very real concerns about the Council's ability to put in place a robust five-year supply of housing land (or to meet the overall housing target for the plan period) if the plan is adopted without significant modification. This critique is included as **Appendix 1**.

2.2 Qn5.1 - Is the Council proposing a formal modification to the land supply information?

- 2.2.1 As set out in detail within our critique, there are areas of the current housing land supply that are not credible, not supported by sufficient evidence and provide an overly optimistic prediction of delivery that is unlikely to be realised. Accordingly, the evidence base is flawed and the plan is not justified.
- 2.2.2 As an example, MBC's housing completion rates have persistently been substandard when analysed over a five (no achievement of target), ten (40% achievement of target) or twenty year period (40% achievement), yet the Council disregards this past performance, resists applying a 20% buffer and fails to positively plan for the housing need with a robust contingency.
- 2.2.3 Furthermore, having regard to the unknown potential of Invicta Barracks, the high windfall allowance and the question marks surrounding the Broad Locations, a third of the Council's local plan housing supply is to be derived from unspecific sites and uncertain sources. This is simply too high to ensure that the plan is effective and deliverable over the plan period.
- 2.2.4 To be justified the plan should be the most appropriate strategy when considered against the reasonable alternatives and based on a proportionate evidence base. On the basis that there are further sustainable, deliverable and developable sites available, a more appropriate and positive strategy would be to allocate these for development rather than rely on components of housing that are unlikely to be delivered and fall outside of the Council's control.
- 2.2.5 The need to put in place robust and realistic assumptions should be of greater importance as the implication of not putting in place a robust housing strategy are significant. Should the level of under delivery continue, as we fear it will, the identified under supply of housing will quickly render the emerging Local Plan out of date - potentially within 12 months of adoption.
- 2.2.6 For the reasons outlined above, we consider it is within the Council's own best interest to review and amend the plan and housing supply strategy to ensure that the plan will endure the plan period. These points are expanded upon where necessary below and within the appended critique and subsequent responses below, but in conclusion the housing supply

elements of the plan are not positively prepared, justified or effective and would fail to boost the supply of housing to the required levels as set out in national policy.

2.3 Qn 5.2 to 5.4 - Policy H2 and Broad Locations

2.3.1 The Council's decision to rely on Broad Locations as a core component of the housing land supply does not represent positive, effective or justified planning when genuinely sustainable and deliverable sites are available. Accordingly, we consider amendments are required to policy H2 and the housing strategy as a whole.

Is the proposed 990 dwelling yield for H2 (1) (Town Centre) adequately justified?

2.3.2 Given the reducing supply of brownfield sites, there is no genuine evidence available to demonstrate 990 additional homes will come forward in Maidstone town centre. Whilst we note the level of low-grade office accommodation that has been identified as having potential to provide housing, this does not mean that such delivery will materialise. For example, there remains an ongoing need for budget office accommodation in the town and it is naïve to assume that only high-grade (more expensive) commercial floorspace is attractive.

2.3.3 Furthermore, the Council must take into consideration that the majority of legitimate and viable opportunities have already largely been exhausted via the SHLAA process, with suitable sites identified within emerging housing and mixed use policies. Accordingly, to allow for 990 unidentified additional units in the town centre, plus a windfall allowance that averages 106 dwellings per annum for the remaining plan period represents 'double counting'.

2.3.4 For this reason, we favour the deletion of Maidstone Town Centre as a Broad Location as part of the housing supply but do not oppose the retention of a credible windfall allowance to allow for unplanned completions that may arise. Alternatively, if the Town Centre broad location is to be retained the subsequent windfall rates should be further reduced.

What should happen if Invicta Park Barracks were not surplus to requirements?

2.3.5 There remains a distinct lack of certainty regarding the long-term future of Invicta Park Barracks and whether the site will become available for development within the plan period.

2.3.6 In this regard, it is noteworthy that on 6th September 2016 The Ministry of Defence (MOD) announced plans for an ambitious Estate Optimisation Strategy programme and the expected release of 13 sites that will contribute 17,017 homes.

2.3.7 The 13 sites subject to Estate Optimisation Strategy programme are listed below but does not include the Invicta Barracks site:

- RAF Henlow (Bedfordshire)
- Middlewick Ranges (Essex)
- Amport House (Andover)
- Land at Harley Hill (Catterick)
- Chalgrove Airfield (Oxford) Transferred to the Homes and Communities Agency
- Colerne Airfield (Chippenham)
- Azimghur Barracks (Chippenham)

- Prince William of Gloucester Barracks (Grantham)
- Old Dalby (Melton Mowbray)
- Venning Barracks (Telford)
- Parsons Barracks (Donnington)
- Southwick Park (Fareham)
- Royal Marines Stonehouse (Plymouth)

- 2.3.8 Given this recent announcement, we retain the view that question marks exist regarding the timescales for release of the land. For this reason, if the site cannot meet these tests of being deliverable or developable and it should not be relied upon at the expense of other genuinely sustainable housing sites that would come forward.
- 2.3.9 Furthermore, given the scale of a potential 1,300-unit development, even a high delivery rate of 100 units pa would require approximately 13 years to complete the development. Furthermore, preparing an outlining application and discharging conditions and reserved matters for a scheme of this size is likely to take several years to achieve. In simple terms, the site would need to be confirmed for release, plans be agreed for the decommissioning of the MOD site and a planning application already advancing through the planning process if there was any chance of the site being delivered in full within the plan period.
- 2.3.10 For clarity, we do not consider it is wrong of the Council to have regard to the site and to plan for a potential re-use in the event that it becomes available. However, to assume that it will deliver 1,300 new homes prior to 2031 is tantamount to unreasonable and therefore for it to be relied upon at the expense of other deliverable sites is grossly unsound.
- 2.3.11 Finally, the site and reliance is of such a scale that as drafted the plan has no contingency should it not come forward.

Is it realistic to expect the H2 (3) Lenham Broad allocation for 1,500 dwellings to be delivered within a 5 year period?

- 2.3.12 We see no sound planning reason why the identification of sites in Lenham have been treated differently to other settlements, or delayed, when sufficient land is available to allocate for housing.
- 2.3.13 We also remain concerned that the proposed strategy relies on all 1,500 units being delivered within the plan period, yet restricts development to between 2026 and 2031 resulting in a need for a consistent delivery of 300 units per year for an intense five-year period. This notion is illogical and unsound in planning terms on the basis that even a healthy housing market could not sustain this form of intensified growth in a five-year period, nor is there any explanation why such sites should be delayed or not spread over the plan period as a whole. This does not represent positive planning and is not an effective or justified planning strategy.
- 2.3.14 Finally, we retain our concern that by not identifying specific sites it would encourage a 'first come first served' style arrangements whereby the growth of Lenham is disaggregated and comes forward on an ad hoc basis rather than via a comprehensive planning strategy.

2.4 Qn5.6 Is the Council's revised windfall allowance justified?

- 2.4.1 We agree that some windfall sites are likely to continue during the plan period. However, we can see no genuine evidence to rely upon them as a key component of the housing supply, particularly in the early stages of the plan period. This is because they will be a reducing supply as brownfield land and other opportunities are increasingly used up and any office/pdl land in Maidstone Town Centre will be included within the 990 unit Broad Location allowance.
- 2.4.2 The NPPF is very clear that Local planning authorities may make an allowance for windfall sites only if they have compelling evidence that such sites have consistently become available in the local area and will continue to provide a reliable source of supply. Any allowance should also be realistic having regard to the Strategic Housing Land Availability Assessment, historic windfall delivery rates and expected future trends, and should not include residential gardens.
- 2.4.3 Given the age of the current development plan any historic delivered of windfall sites cannot be a robust basis to calculate a new allowance, so windfalls should be approached with significant caution to ensure no over reliance. They should be treated as a 'bonus' until such time as robust evidence of windfall generation, over a sustained period, has been established.
- 2.4.4 To ensure there is not an over reliance, we consider any windfall rates should be capped to 50 units per year for the later part of the plan period (for the period 2021 – 2031) whilst credible new evidence can be collated. This is even more important given the Council has a duty to balance housing and economic needs as the Council simply cannot continue to allow the loss of employment sites (the key source) to supplement housing need.

2.5 Qn5.7 Can the Council estimate windfall sites in the extant planning permissions?

- 2.5.1 Whilst this analysis would be a useful guide, there can be no doubt that a windfall allowance within the immediate five year period, plus any reliance of extant consents on non-allocated sites, would represent double counting and would over predict the level of housing that would be provided. Whilst this may assist the supply on paper, it will make it more fragile in reality.

2.6 Qn5.8 Is the 5% allowance for non-implementation reasonable?

- 2.6.1 We note that a discount has been made to allow for the non-implementation of extant planning permissions. Whilst an industry standard approach is to apply a discount of 10% we note the evidence presented to justify a reduced discount of 5% on the full and outline consents and raise no objection to this approach.
- 2.6.2 However, given the fact that localised evidence does not yet exist in respect of the non-delivery of prior notification consent, a more cautious approach is advocated for this source of housing.
- 2.6.3 Classes M to Q of the Town and Country Planning (General Permitted Development) (England) Order 2015 make provision for the change of use of various different uses to dwellings without the need for full planning permission. Proposals made under these provisions are subject to 'prior notification' applications.

-
- 2.6.4 In total, 700 units (737 minus 5% for non-implementation) of the Council's five year housing land supply are made up of prior notification approvals rather than full or outline planning permissions, so these need to be treated with a degree more caution than full or outline planning permission.
- 2.6.5 Given the simplicity of Prior Notification applications, we have first-hand knowledge that some applicants and business owners have sought to make best use of these new opportunities to increase land values and negotiate higher rental charges. Furthermore, undertaking the prior notification process does not show the commitment to deliver in the same way as those landowners and developers wishing to progress full planning applications. Accordingly, we consider there to be far more risk of the consents expiring without implementation, which should be reflected by a more cautious non-delivery rate.
- 2.6.6 In order to ensure the Council is not overly reliant on a less secure component of the housing land supply, we consider a higher non-implementation rate should be applied to the Prior Notification consents. We consider 20% appropriate based upon the need to take a cautious approach and deliver a robust and credible supply of housing land.

2.7 Qn5.9 Is there a need for reserve allocations?

- 2.7.1 Given that 33% of the Council's overall housing supply is from general and nonspecific sources, we consider there to be a need to insert a significant number of additional housing sites as firm housing allocations. Nevertheless, we also consider that the addition of a strategic reserve site would be a sound approach and would build some further flexibility in the event that the supply does not come forward as predicted.
- 2.7.2 A reasonable example of a reserve policy within Kent is policy LO6 of the Sevenoaks District Core Strategy (adopted 2011), which allocated land to the west of Edenbridge as Reserve Land to be brought forward for development after 2015 if required to maintain a five year supply of housing land in the District. The identification of the site in this form was not included within the housing land supply components for the plan period, yet still provided a contingency capable of providing approx. 8.5% of the overall housing requirement in the event that housing did not come forward in the period envisaged.
- 2.7.3 If a similar 8.5% approach were followed for Maidstone, the outstanding need to provide 16,465 new homes would yield the need for land capable of providing approximately 1,300 new homes. This land would need to be capable of being brought forward swiftly in the event of a housing supply shortage, so given the scale it would likely be prudent to provide this over a series of wider opportunities to ensure swift delivery in the event of a deficit of housing.
- 2.7.4 Any reserve sites, and associated delivery mechanism, must be integral to the emerging plan and not left to a subsequent review. This is because a review process would be too lengthily for the authority to be able to rapidly respond to changes in circumstances, which is a key component of the presumption in favour of sustainable development when plan making.
- 2.7.5 As per the Sevenoaks Core Strategy, we would suggest that reserve land be identified and subject to a 'trigger' that it will not be considered for release before 2021 with the test for its release after that date to be whether the Annual Monitoring Report shows a five year supply of deliverable sites without the inclusion of the Reserve Land. Having a strategic bank of

reserve sites available would allow the plan to bring land forward swiftly and to maintain a consistent source of supply and keep it valid.

2.7.6 Finally, in respect of the selection process for reserve land, the nature of the designation means it must be unconstrained, suitable for development and able to be brought forward swiftly. Accordingly, such site selection should be subject to further evidence gathering, public consultation and sustainability appraisal as part of a main modification process.

2.8 Qn5.10 Is the Council's 5 years supply calculation accepted or disputed and, if so, why?

2.8.1 Taking into consideration both the matters outlined above, and the detailed critique of the Council's housing land supply, we consider the Council's five-year supply to be unrealistic and not underpinned by robust evidence. Accordingly, without modification it renders the Council's emerging Local Plan unsound.

3 Conclusions and Suggested Modifications

3.1 Summary

3.1.1 The Council's planning strategy is currently not underpinned by robust evidence and therefore this element of the plan is unsound. Accordingly, it is recommended that main modifications are necessary owing to the housing land supply deficiency and due to the inadequate identification of housing to meet the plan target as a whole.

3.1.2 For this reason, existing firm housing allocations within the draft plan must be maintained. Furthermore, additional sites must be identified.

3.2 Suggested Modifications

3.2.1 We consider it essential to retain all deliverable allocations, including our client's site H1 (29) for new Line Learning Boughton Lane, which remains deliverable within the plan period (as expanded on within our other matter statements).

3.2.2 Furthermore, substantial modifications are also required in respect of both firm allocations and through the identification of strategic reserve sites.

1 Introduction

1.1 Purpose of this Statement

- 1.1.1 This housing supply assessment has been prepared by DHA Planning to provide an independent assessment of Maidstone Borough Council's (MBC) current housing land supply position (as at 1 April 2016) and to critically review the housing evidence that underpins the emerging Local Plan, which is currently subject to Independent Examination.
- 1.1.2 The report provides an overview of national planning policy that requires local planning authorities to identify a robust supply of housing land to meet five year's supply against the housing requirement. We then undertake our own impartial analysis of the latest housing land supply position set out within the Local Plan Housing Topic Paper 2016, as this represents the key housing evidence that underpins the submission draft of the emerging Local Plan. The Topic Paper is provided in full at **Appendix A**.
- 1.1.3 Our critique includes an assessment of the robustness of the assumptions made by MBC having regard to key sites and components of the current supply that may not come forward as planned and the implications that such sites may have on the future provision of housing in Maidstone Borough.
- 1.1.4 The report concludes by providing a summary of our findings and the wider implications of the Council not being able to demonstrate a credible five year land supply. We also have regard to concerns about the potential to meet the housing target included within the emerging new Local Plan.

1.2 Statement Structure

- 1.2.1 Section 2 sets out the national requirement for providing a robust supply of housing land and provides an overview of the key legal principles regarding housing need and meeting housing requirements.
- 1.2.2 Section 3 outlines the Council's current Local Plan position and the latest housing supply figures having regard to the latest published information.
- 1.2.3 Section 4 analyses the various components of supply and whether the Council can robustly demonstrate a five year supply of housing land. We also identify the areas of supply that must be challenged in order to ensure the land identified for housing will come forward as planned. Within this chapter we also provide a revised assessment of the current supply position based on what we consider to be more realistic assumptions about key sites and delivery rates.
- 1.2.4 Section 5 considers the emerging Local Plan period as a whole, reviews the evidence that underpins the housing strategy and draws conclusions regarding the likelihood of the Council achieving its desired level of housing delivery over the plan period 2011 to 2031.
- 1.2.5 Section 6 provides a conclusion on the current position and the implications for the Council given concerns that neither the five year, of full plan period, positions show the

ability to robustly deliver the required levels of housing. We also summarise the decision making process that should apply in the absence of an up to date housing strategy.

2 National Housing Requirements

2.1 The National Planning Policy Framework

2.1.1 The National Planning Policy Framework (NPPF) came into effect on 28th March 2012.

2.1.2 At the heart of the NPPF is a presumption in favour of sustainable development, which should be seen as a golden thread running through both plan-making and decision-taking. For plan-making this means:

- *local planning authorities should positively seek opportunities to meet the development needs of their area; and*
- *Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change, unless:*
 - *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in the Framework taken as a whole; or*
 - *specific policies in the Framework indicate development should be restricted.*

2.1.3 For decision-taking, the presumption means approving development proposals that accord with the development plan without delay and where the development plan is absent, silent or relevant policies are out-of-date, granting permission unless:

- *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in the Framework taken as a whole; or*
- *specific policies in the Framework indicate development should be restricted.*

2.1.4 For decision making, the key to the presumption in paragraph 14 is the proposition that (providing there are no specific policies that dictate development should be resisted) sustainable development means granting planning permission unless the adverse consequences of doing so significantly and demonstrably outweigh the benefits.

2.1.5 Paragraph 14 does not indicate that permission should be withheld if the planning balance was a little bit against the grant of permission. To the contrary, it is part of a pro-development policy which has the effect of radically tilting the balance in favour of the grant of permission. Consequently, it would be wrong in such cases to approach the presumption by applying a simple balancing between positive and negative factors. Until a plan is up to date it is only proposals that have adverse effects markedly (“significantly”) outweighing the benefits overall and would constitute development that was unsustainable, that should not be granted.

2.1.6 In respect of planning for housing, The NPPF places pressure on Local Authorities to ‘significantly boost’ the supply of housing by adhering to the requirements cited under Paragraph 47, which states that in order to increase housing supply, Local Authorities should;

- *use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in the Framework, including identifying key sites which are critical to the delivery of the housing strategy over the plan period;*
- *identify and update annually a supply of specific deliverable sites sufficient to provide five years' worth of housing against their housing requirements with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. Where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land;*
- *identify a supply of specific, developable sites or broad locations for growth, for years 6-10 and, where possible, for years 11-15;*
- *for market and affordable housing, illustrate the expected rate of housing delivery through a housing trajectory for the plan period and set out a housing implementation strategy for the full range of housing describing how they will maintain delivery of a five-year supply of housing land to meet their housing target; and*
- *set out their own approach to housing density to reflect local circumstances.*

2.1.7 Importantly, paragraph 49 states:

'relevant local policies for the supply of housing should not be considered up to date if the Local Planning Authority cannot demonstrate a five-year supply of deliverable housing sites'.

2.2 Constructing Arguments for a Planning Application

2.2.1 In the event that paragraph 49 is engaged and an authority cannot demonstrate a robust supply of housing land, the decision maker must revert back to the tests set out in the presumption in favour of sustainable development.

2.2.2 Whilst this does not automatically lead to the grant of planning permission, it drastically alters the weight that can be attributed to existing policies for the supply of housing.

2.2.3 The flow chart in figure 1 overleaf summarises the process by which applications should be considered in the event of an authority not being able to demonstrate the required supply of housing.

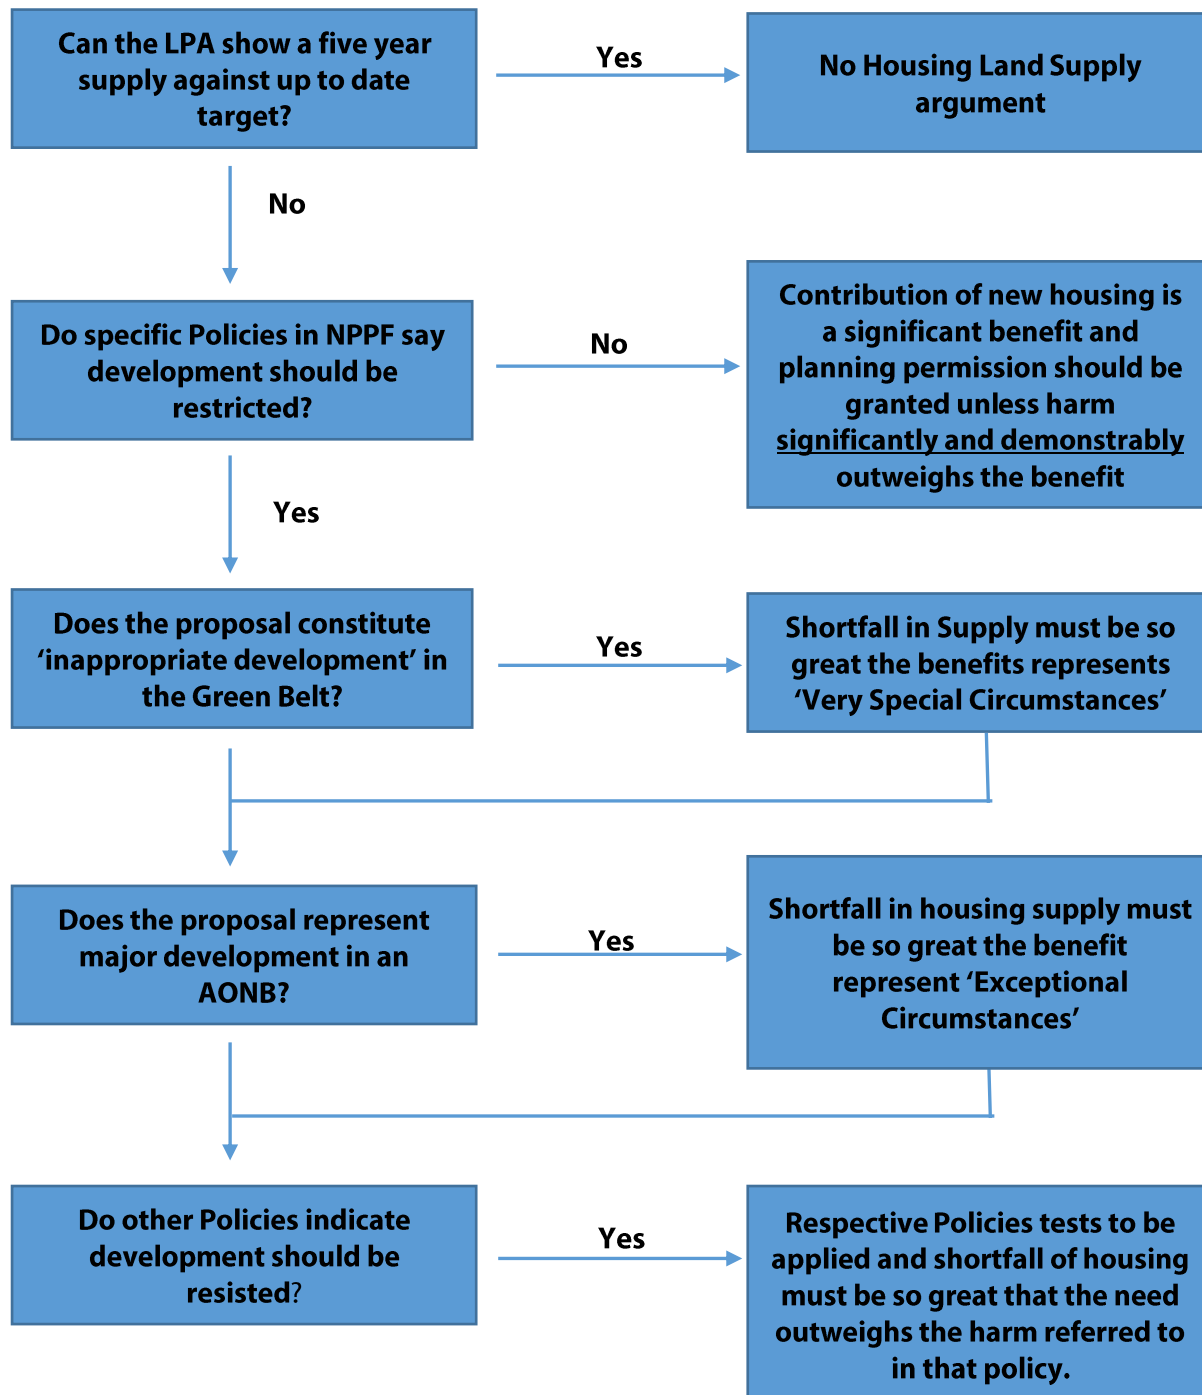

Figure 1: decision making process in the event of a five year supply deficit.

2.3 Relevant Legal Principles

2.3.1 The proper interpretation of the policy within paragraph 47 was addressed by the Court of the Appeal in *St Albans CDC v Hunston* (2013 EWCA Civ 1610).

2.3.2 This case had regard to how determination of the requirement for the five-year housing land supply was to be approached within the context of a development control decision. Delivering the leading judgment of the Court of Appeal, Sir David Keene observed as follows:

"25. I am not persuaded that the inspector was entitled to use a housing requirement figure derived from a revoked plan, even as a proxy for what the local plan process may produce eventually. The words in paragraph 47(1), "as far as is consistent with the policies set out in this Framework" remind one that the Framework is to be read as a whole, but their specific role in that sub-paragraph seems to me to be related to the approach to be adopted in producing the Local Plan. If one looks at what is said in that sub-paragraph, it is advising local planning authorities:

"to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing in the housing market area, as far as is consistent with the policies set out in this Framework."

That qualification contained in the last clause quoted is not qualifying housing needs. It is qualifying the extent to which the Local Plan should go to meet those needs. The needs assessment, objectively arrived at, is not affected in advance of the production of the Local Plan, which will then set the requirement figure.

Moreover, I accept Mr Stinchcombe QC's submissions for Hunston that it is not for an inspector on a Section 78 appeal to seek to carry out some sort of local plan process as part of determining the appeal, so as to arrive at a constrained housing requirement figure. An inspector in that situation is not in a position to carry out such an exercise in a proper fashion, since it is impossible for any rounded assessment similar to the local plan process to be done. That process is an elaborate one involving many parties who are not present at or involved in the Section 78 appeal. I appreciate that the inspector here was indeed using the figure from the revoked East of England Plan merely as a proxy, but the government has expressly moved away from a "top-down" approach of the kind which led to the figure of 360 housing units required per annum. I have some sympathy for the inspector, who was seeking to interpret policies which were at best ambiguous when dealing with the situation which existed here, but it seems to me to have been mistaken to use a figure for housing requirements below the full objectively assessed needs figure until such time as the Local Plan process came up with a constrained figure.

27. It follows from this that I agree with the judge below that the inspector erred by adopting such a constrained figure for housing need. It led her to find that there was no shortfall in housing land supply in the district. She should have concluded, using the correct policy approach, that there was such a short fall. The supply fell below the objectively assessed five year requirement.

28. However, that is not the end of the matter. The crucial question for an inspector in such a case is not: is there a shortfall in housing land supply? It is: have very special circumstances been

demonstrated to outweigh the Green Belt objection? As Mr Stinchcombe recognised in the course of the hearing, such circumstances are not automatically demonstrated simply because there is a less than five year supply of housing land. The judge in the court below acknowledged as much at paragraph 30 of his judgment. Self-evidently, one of the considerations to be reflected in the decision on "very special circumstances" is likely to be the scale of the shortfall.

29. But there may be other factors as well. One of those is the planning context in which that shortfall is to be seen. The context may be that the district in question is subject on a considerable scale to policies protecting much or most of the undeveloped land from development except in exceptional or very special circumstances, where because such land is an Area of Outstanding Natural Beauty, National Park or Green Belt. If that is the case, then it may be wholly unsurprising that there is not a five year supply of housing land when measured simply against the unvarnished figures of household projections. A decision-maker would then be entitled to conclude, if such were the planning judgment, that some degree of shortfall in housing land supply, as measured simply by household formation rates, was inevitable. That may well affect the weight to be attached to the shortfall."

2.3.3 In *Oadby & Wigston BC v SSCLG* [2015] EWHC 12, Hickinbottom, J summarised the relevant legal principles in the following terms:

"17. In respect of housing provision, the NPPF thus effected a radical (generally, pro- housing development) change from the previous policy (Solihull Metropolitan Borough Council v Gallagher Estates Limited and Lioncourt Homes Limited [2014] EWCA Civ 1610 at [7]-[16]); and, if the local planning authority has not adopted a new local plan since the NPPF came into effect, its housing requirement should be calculated on the current FOAN, unqualified and unconstrained by other policies (City and District Council of St Albans v Hunston Properties Limited and the Secretary of State for Communities and Local Government [2013] EWCA Civ 1610 ("Hunston") at [21]-[27])."

3 Maidstone Borough Council Published Supply

3.1 Objectively Assessed Housing Need

- 3.1.1 Following the Government's announcement that the starting point for a Local Plan is to meet the full objectively assessed need (FOAN) for development, a Strategic Housing Market Assessment (SHMA) was first produced in January 2014 by GL Hearn (in conjunction with Ashford Borough Council and Tonbridge and Malling Borough Council). This initial report identified a need for 980 homes per annum for Maidstone Borough during the period 2011-2031.
- 3.1.2 Following an addendum in August 2014 and publication of revised population projection figures in May 2015, an update to the SHMA was produced by the consultants to reflect more up-to-date demographic data. This work revealed a slightly decreased annual need of 928 homes per year, or 18,560 dwellings over the plan period as a whole.
- 3.1.3 In addition to the FOAN, a minimum 980 residential institution bed-spaces are needed over the Plan period (this represents an average of 49 bed-spaces per annum).

3.2 Starting Point for Calculating Five Year Requirement

- 3.2.1 Pending the outcome of the ongoing Local Plan review process and the absence of a development plan adopted in accordance with the NPPF, the FOAN figure of 928 dwellings per annum represents the starting point for considering the Council's five year housing land supply requirement.
- 3.2.2 As the FOAN has been calculated over the period 2011 to 2031 we are already five years into the new plan period. Existing completions between 2011 and 2016 therefore need to be factored into the calculations of future supply needs. The current target, having regard to completions that have taken place between 2011 and 2016, is shown within figure 2 below.

	No. of Dwellings
Requirement	
SHMA Requirement - 2011 to 2031 (928 per annum)	18,560
Completions – 2011 to 2016	2,860
Remaining Requirement – 2016 to 2031	15,700
Deficit Accrued to Date (2011 – 2016)	-1,780
Revised Annual Target (5 x 928)	4640
Deficit Recovery (Sedgefield)	1,780
Total Requirement	6,420
Target with 5% buffer (+321 units)	6,741
Target with 20% buffer (+1,284 units)	7,704

Figure 2: Housing Supply requirement 2016 to 2019

3.2.3 The Council's published figures accept a housing land supply requirement of 6,741 dwellings in line with a 5% buffer requirement.

3.2.4 We address the validity of applying a 5% buffer rather than 20% within Section 4 of this report.

3.3 Maidstone Borough Council Published Supply Position

3.3.1 At the time of writing, the most up-to-date information on the five year supply position is Local Plan Examination Core Document SUB 005 (Maidstone Borough Local Plan Housing Topic Paper 2016). The Council's latest supply figures are summarised in Figure 3.

	No. of Dwellings
Supply 2016/2021	
Sites with Planning Permissions (inc MBC non implementation discount)	4,259
Housing from Emerging Allocations	2,540
Windfall Allowance	96
Total Published Supply	6,895

Figure 3: MBC's published housing supply components 2016 to 2021

3.4 Ability to Demonstrate a Five Year Supply

3.4.1 Based on the current housing land supply requirement, and the published MBC figures, we consider the Council's published position shows a minor surplus of 106 units if a 5% buffer is applied and all of the assumptions and methodology is accepted. However, even based on the published position, a major deficit would occur if a precautionary 20% buffer is included.

3.4.2 The figures are emphasised in Figure 4 overleaf.

	No. of Dwellings
SHMA Requirement - 2011 to 2031 (928 per annum)	18,560
Completions – 2011 to 2016	2,860
Remaining Requirement – 2016 to 2031	15,700
Deficit Accrued to Date (2011 – 2016)	-1,780
Revised Annual Target (5 x 928)	4640
Deficit Recovery (Sedgefield)	1,780
Total Requirement	6,420
Target with 5% buffer (+321 units)	6,741
Target with 20% buffer (+1,284 units)	7,704
Published Supply 2016/2021	
Sites with Planning Permissions (inc non implementation discount)	4,260
Housing from Emerging Allocations	2,540
Windfall Allowance	96
Total Published Supply	6,896
Surplus based on 5% buffer being required	155 units
No. years supply based on 5% buffer being required	5.12 years
Deficit based on 20% buffer being required	- 808
No. years supply based on 20% buffer being required	4.48 years

Figure 4: MBC's published housing supply components 2016 to 2021

3.5 Summary

3.5.1 The above published position highlights two critical points:

- (1) The Council's own published position is reliant on a 5% buffer rather than a 20% buffer; and
- (2) Even with a more generous buffer being applied, the modest surplus of 155 units is marginal as can be seen when the components are examined in further detail.

3.5.2 Chapter 4 outlines further concerns about the validity of the calculation and includes our own critique of the supply components.

4 Critique of Five Year Supply Components

4.1.1 This chapter scrutinises the Council’s supply methodology, the components of the current supply and provides commentary on the robustness of the Council’s assumptions and methodology. In turn, these matters inform a revised assessment of the current housing land supply.

4.2 Deficit Recovery Methodology

4.2.1 Where a deficit has arisen against the FOAN requirement during earlier phases of the plan period, there are two established ways this can be addressed within the five-year housing land supply calculation; the ‘Liverpool’ or ‘Sedgefield’ methods.

4.2.2 The Liverpool approach is to spread the unmet need equally over the remaining years of the plan. The Sedgefield approach ensures the deficit will be addressed within the immediate five year period.

4.2.3 Whilst the Liverpool method is on occasions utilised by Inspectors through the Local Plan process where there are unique circumstances (i.e. reliance on a major strategic site that will come forward later in the plan period), it is usually resisted because spreading the deficit often just masks delivery problems rather than tackling them. Furthermore, the ‘Sedgefield approach’ is supported by National Planning Practice Guidance (PPG) (paragraph: 035 Reference ID: 3-035-20140306), which is clear that local planning authorities should aim to deal with any undersupply within the forthcoming five year period.

4.2.4 We welcome that MBC has accepted the need to apply the Sedgefield method within the current calculation and consider it to be the correct approach.

4.3 Applying a 5% or 20% Buffer

The NPPF states that to boost the supply of housing, local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide five years’ worth of housing against their housing requirement, with an additional buffer of 5% (moved forward from later in the plan period) to ensure choice and competition in the market for land. However, where there has been a record of persistent under delivery of housing, local planning authorities should increase the buffer to 20% (moved forward from later in the plan period) to provide a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land.

4.3.1 Whilst it is accepted that there is no clear definition of ‘persistent under-delivery’, in principle it is about understanding an authority’s track record by comparing completions against requirement over a reasonable time period. In broad terms, persistent under delivery is something that has continued over time. Judge Lewis in the Cotswold judgement ([2013] EWHC 3719 (Admin) 27 November 2013) said that ‘it should not be a ‘temporary or short lived fluctuation’.

4.3.2 The Practice Guidance also recognises that the local delivery record is likely to be more robust if a longer term view is taken since this has regard to the economic cycles and

market conditions. Equally, it is clear that recession should not be used as an excuse for low delivery.

4.3.3 Given the above advice, MBC's performance for a full twenty year period is shown within Figure 5 below.

Year	Annualised Target (at the time)	Status
1996/97	460	Under Delivery
1997/98	460	Under Delivery
1998/99	460	Under Delivery
1999/2000	460	Target Exceeded
2000/01	460	Under Delivery
2001/02	460	Target Exceeded
2002/03	460	Under Delivery
2003/04	460	Under Delivery
2004/05	460	Target Exceeded
2005/06	460	Target Exceeded
2006/07	554	Target Exceeded
2007/08	554	Target Exceeded
2008/09	554	Under Delivery
2009/10	554	Target Exceeded
2010/11	554	Target Exceeded
2011/12	928	Under Delivery
2012/13	928	Under Delivery
2013/14	928	Under Delivery
2014/15	928	Under Delivery
2015/16	928	Under Delivery

Figure 5: Housing Completions 1996 to 2016

4.3.4 Figure 5 shows that during the course of the recent twenty year period MBC has under delivered on 12 (60%) of the twenty occasions.

4.3.5 If one were to take the ten year period since 2006, six of these have seen the authority fail to meet the required level of housing supply (again 60%). Furthermore, the Council has fallen woefully short of the current FOAN target for five years consecutively (100% under delivery).

4.3.6 Given the evidence of completions against target requirements, there clearly has been a record of persistent under delivery of housing within MBC that should now lead to the local planning authority increasing the housing supply buffer to a precautionary 20% until such time as housing targets can consistently be met. Furthermore, it should be remembered that the provision is to be applied to ensure a realistic prospect of achieving the planned supply and to ensure choice and competition in the market for land and should not be seen as a punishment.

4.3.7 Should the level of under delivery be allowed to continue for a longer period of time, it will undoubtedly weaken the Council's overall housing supply position and quickly render the emerging Local Plan out of date.

4.3.8 For the reasons outlined above, we consider the Council's current housing supply evidence demonstrates a need for a 20% buffer to be applied.

4.4 Sites with Planning Permission (Extant Consents)

4.4.1 As part of this analysis we have reviewed the detailed list of planning permissions that make up the 'Sites with Planning Permission List'. From here we have analysed the deliverability of the sites and identified a series of discrepancies that influence the supply calculations.

Marden Cricket and Hockey Club (13/1928)

4.4.2 DHA Planning represents Countryside Properties who are the developer for the above site and as such we have up to date access to information regarding delivery of the site.

4.4.3 In summary, planning permission was granted for 124 units as part of a wider development that will see the construction of new and improved sports facilities within Marden, including a new clubhouse, cricket pitch, artificial multi-purpose sports pitches and tennis courts. There will also be a community orchard for the local residents.

4.4.4 Given the need to provide the new and replacement community facilities in advance of the delivery of housing, the Council's assumption that all 124 units will be delivered in the immediate five year period is considered to be overly optimistic. Accordingly, a more realistic position would be to assume 80 units would be delivered prior to 2021 with the remaining 44 delivered in the year 2021 to 2022. Given the above, we consider the extant permissions source of the five year supply calculation should be reduced by 44 units.

Land off Farleigh Hill, Tovil (10/0256)

4.4.5 Planning application 10/0256 approved outline planning permission for 272 new dwellings at the above site. Furthermore, an application for reserved matters (siting, design, external appearance and landscaping) is currently pending consideration under planning reference 15/509041/REM.

4.4.6 Nonetheless, despite the presence of a pending application, a number of developers have expressed an interest in the site only to fail to conclude a deal when due diligence was carried out. This is due to significant development constraints and the presence of contamination that poses a significant threat to the overall viability. In this regard, it should be noted that the applications are being advanced via the landowner rather than a named developer partner.

4.4.7 Given the well-known constraints, and the number of developers that have failed to consider a land deal, we consider further evidence must be presented in respect of this site and that it would be prudent not to rely upon this site as a source of housing during the immediate five year period – particularly when the site has not progressed in the five years prior.

- 4.4.8 We consider the extant permissions should be reduced by 72 units to reflect the uncertainty of this site and that it is most likely to come forward post 2021 (if at all).

Land between Mill Bank, Ulcombe Road and Kings Road, Headcorn (15/503325)

- 4.4.9 DHA Planning represents the developer for this site.
- 4.4.10 Application 15/503325 was permitted in 2015 in outline form for the residential element of a wider hybrid scheme. Based on up to date information, we are advised that given the cumulative levels of development already taking place in Headcorn, reserved matters applications and subsequent commencement is programmed for late within the five year period. Accordingly, approximately 50 units are likely to come forward pre 2021.
- 4.4.11 Reliance of delivery on this site should be reduced by 75 units for the purpose of the five year supply calculation.

Child Adolescent Services, Garland House, Maidstone (13/1709)

- 4.4.12 Following the grant of planning permission 13/1709 for conversion of the premises to apartments, Garland House has now been changed to a Free School under Maidstone planning reference 14/503957/FULL. Accordingly, planning permission upon which the Council relies cannot be implemented.
- 4.4.13 The supply figure should be reduced by 14 units.

Overall Reduction from Extant Sites List

- 4.4.14 In light of the proposed discounts on sites identified above, 205 units should be deleted from the Council's extant permission source of the five year supply.

4.5 Non Implementation Rates

Change of use to residential permitted under Classes M, N, O, P and Q of the GPDO.

- 4.5.1 Classes M to Q of the Town and Country Planning (General Permitted Development) (England) Order 2015 make provision for the change of use of various different uses to dwellinghouses without the need for full planning permission. Proposals made under these provision are subject to 'prior notification' applications.
- 4.5.2 In total, 700 units (737 minus 5% for non-implementation) of the Council's five year housing land supply are made up of prior notification approvals rather than full or outline planning permissions and these need to be treated with a degree more caution than full or outline planning permission. Given the simplicity of such applications, many applicants and business owners have sought to make best use of these new opportunities to increase land values and in some instances negotiate higher rental charges. Furthermore, undertaking the prior notification process does not show the commitment to deliver in the same way as those landowners and developers wishing to progress full planning applications. Accordingly, we consider there to be far more risk of the consents expiring without implementation which should be reflected by a more cautious non delivery rate.

4.5.3 In light of the above, and to ensure the Council is not overly reliant on a less secure component of the housing land supply, we consider a higher non implementation rate should be applied to these consents. We consider 20% to be appropriate based upon the need to take a cautious approach and deliver a robust and credible supply of housing land.

4.5.4 Based on a 20% discount 147 units should be deleted from the five year supply calculation.

Non Implementation Rate for Full/Outline Extant Permission

4.5.5 Notwithstanding the position outlined above, we note that a discount has been made to allow for the non-implementation of extant planning permissions.

4.5.6 Whilst an industry standard approach is to apply a discount of 10% we note the evidence presented to justify a reduced discount of 5% on the full and outline consents and raise no objection to this approach. However, given the fact that localised evidence does not yet exist in respect of the non-delivery of prior notification consent, a more cautious approach is advocated for this source of housing.

4.6 Phasing of Proposed Housing Allocations

H1 (10) Land South of Sutton Road, Langley

4.6.1 DHA Planning represents Countryside Properties who are the developer for the site and as such we have access to up to date information regarding delivery.

4.6.2 In summary, an outline scheme for 800 new homes has a Council resolution to grant permission, subject to the completion of a Section 106 agreement. However, given the size of the scheme the drafting and completion of the agreement is not anticipated until late 2016/early 2017. Upon completion, it will then be necessary to discharge planning conditions, submit and agree reserved matters and upgrade the infrastructure necessary to serve a scheme of this nature.

4.6.3 It is also important to stress that there is ongoing discussion between Kent County Council and MBC in respect of the local highway network and its capacity to absorb development of the scale proposed, which remains a significant objection to the soundness of the emerging Local Plan. Whilst we do not support these objections, it is an outstanding issue that may remain unresolved pending the outcome of the Local Plan review process.

4.6.4 In summary, given the significant degree of additional work that is required prior to construction and delivery of the scheme, and the outstanding transport objection, the Council's phasing requires review. The Council's 200 dwellings within the immediate five year period assumes an average completion rate of 50 dwellings per year from 2017/2018, which is entirely unrealistic given the scale of the development and the need for detail to be agreed.

4.6.5 A more robust estimate would be for completions to commence in the years 2019/2020 at a rate of 50 dwellings per annum (100 dwellings within the immediate five year period). Accordingly, we consider the Council's figures must be discounted by 100 units.

H1 (17) Laguna Motors, Hart Street

- 4.6.6 This site has previously been subject to a planning application by a developer in 2007. However, we understand that since this time the developer has relinquished the site and is no longer actively pursuing development.
- 4.6.7 Given the ongoing commercial use, the complexities of delivering a development within the tight surroundings and the lack of any developer interest, we consider the assumption that all units will be planned for, constructed and delivered within the immediate five year period to be overly optimistic. We consider these units should not be relied upon within the five year calculation and the supply calculation should be reduced by 76 units to reflect the uncertainty.

H1 (20) Wren's Cross, Maidstone

- 4.6.8 As with Laguna Motors, the lack of any developer interest means that the MBC assumption that all units will be planned for, constructed and delivered within the immediate five year period is over optimistic. In the absence of advanced evidence that the site is deliverable pre 2021, we consider these units should not be relied upon within the five year calculation.
- 4.6.9 In the absence of firm interest or a pending application, we consider the supply calculation should be reduced by 60 units to reflect the uncertain nature of this site.

H1 (48) Land South of the Parsonage, Marden

- 4.6.10 Land south of the Parsonage relies solely on adjacent land being delivered before the site itself can start to be delivered. Whilst this adjacent site has been subject to outline planning permission and an approved reserved matters application for up to 144 new homes (approved July 2016), it seem unrealistic that all of these 144 homes would be delivered, planning permission secured, conditions discharged and units delivered on the second phase pre 2021.
- 4.6.11 To the contrary, it seems far more probable that the site yield would be realised upon completion of the initial development post 2021. For this reason, we consider 50 units are likely to be completed after the immediate five year period and should be deleted from the supply calculation.

H1 (49) Hen and Duckhurst, Staplehurst

- 4.6.12 An outline scheme for 248 new homes has a Council resolution to grant planning permission subject to the completion of a Section 106 agreement. However, given the S106 agreement has not been signed 18 months after a resolution to grant, the timescale for completion of the agreement is very open.
- 4.6.13 Upon completion, it too would need to be subject to discharge of planning conditions, submission and agreement of reserved matters and installation of the necessary infrastructure to serve a scheme of this nature.

- 4.6.14 Given the significant degree of additional work that is required, the Council's phasing requires review.
- 4.6.15 The Council's 164 dwellings within the five year period assumes an average completion rate of 55 dwellings per year from 2018/2019, which in our view is unrealistic given the the need for detail to be agreed. A more robust estimate would be for completions to commence in the years 2019/2020 at a rate of 50 dwellings per annum (100 dwellings within the immediate five year period).
- 4.6.16 Accordingly, we consider the Council's figures should be discounted by 64 units.

RMX 1(4) Former Syngenta Site, Yalding

- 4.6.17 The former Syngenta works was previously used for agro-chemicals production and is now vacant. However, it is a long standing development site having been first allocated within the adopted Maidstone Local Plan. Nevertheless, development has not advanced due to the number of constraints that apply to the land.
- 4.6.18 Whilst there is no strategic objection to the site being identified for residential led mixed use development, a cautious approach is needed given the ongoing history of non-delivery. Accordingly in the absence of specific and robust evidence of immediate delivery, we consider no units should be relied upon within the immediate five year period.
- 4.6.19 We propose that the housing supply figures be reduced by 40 dwellings to reflect this change.

Summary of Allocation Discounts

- 4.6.20 Based on the summary of issues outlined above, a total of 390 units should be pushed into the period post 2021 to ensure that the Council is not reliant on speculative sites that are unlikely to deliver the required levels of housing.

4.7 Summary

- 4.7.1 Taking into account the issues identified above, we consider there are a number of areas where the Council is over predicting delivery. Accordingly we provide our own updated assessment of the current situation overleaf.

Figure 6: Revised Assessment of Five Year Housing Supply

Requirement	No. Dwg
SHMA Requirement – 2011 to 2031 (928 per annum)	18,560
Completions – 2011 to 2016	2,860
Remaining Requirement – 2016 to 2031	15,700
Deficit Accrued to Date (2011 – 2016)	-1,780
Revised Annual Target (5 x 928)	4640
Deficit Recovery (Sedgefield)	1,780
Total Requirement	6,420
Target with 20% buffer	7,704
MBC Published Supply Assumptions 2016/2021	
Sites With Full or Outline Planning Permissions (Prior to Discounts)	3,747
Sites With Prior Notification Consent (Prior to Discounts)	737
Housing from Emerging Allocations (2016 to 2021)	2,540
Windfall Allowance	96
Total Published Supply prior to discounts	7,120
DHA Proposed Discounts (See Chapter 4)	
Discount for unrealistic assumptions regarding extant consents	-205
1. Marden Cricket and Hockey Club (13/1928)	-44
2. Land off Farleigh Hill, Tovil (10/0256)	-72
3. Land between Mill Bank, Ulcombe Road and Kings Road, Headcorn (15/503325)	-75
4. Child and Adolescent Services, Garland House, Maidstone (13/1709)	-14
Discount for non-implementation of remaining sites with Full/Outline permission (5%)	-177
Discount for non-implementation of sites with Prior Notification consent (20%)	-147
Discount for unrealistic assumptions regarding emerging allocations phasing	-390
1. H1 (10) Land South of Sutton Road, Langley	-100
2. H1 (17) Laguna Motors, Hart Street	-76
3. H1 (20) Wren's Cross, Maidstone	-60
4. H1 (48) Land south of the Parsonage, Marden	-50
5. H1 (49) Hen and Duckhurst, Staplehurst	-64
6. RMX1(4) Former Syngenta Site	-40
Discount for removal of windfall allowance (see section 5.4)	-96
Total Discounts	-1,015
Revised Assessment	
Five Year Target	7,704
Five Year Supply	6,105
Total Surplus/Deficit	-1,599
No. Years Supply	3.9 Years

4.8 Summary

- 4.8.1 As can be seen from the revised assessment, the Council's current housing supply position shows a significant deficit against the formal requirement for housing that amounts to approximately 1,600 units when the appropriate and necessary buffers and discounts are applied to the figures.
- 4.8.2 Furthermore, whilst we maintain that a 20% buffer is absolutely necessary because of persistent under delivery, if an Inspector were to conclude that a 5% buffer were reasonable, there would still be a shortfall of 636 new homes once speculative sources of the supply are removed.

5 Housing Supply for the Plan Period

- 5.1.1 Notwithstanding the importance of delivering a rolling five year supply of housing land, we have wider concerns regarding the overall delivery of the FOAN for the plan period as a whole.
- 5.1.2 As can be seen from the table below, the Council seeks to allocate land to accommodate the FOAN figure of 18,560 new homes. This means that having regard to existing completions that have taken place to date (2011 to 2016), there is a subsequent need to identify land sufficient to provide 15,700 new houses between 2016 and 2031.
- 5.1.3 The Council has consequently identified the following sources of supply as outlined in Figure 7.

Component	MBC Published Position (units)
Extant planning permissions (including resolutions to Grant Planning Permission) after non implementation rates.	5,475
Local Plan Allocations	5,600
Broad Locations for Growth <ul style="list-style-type: none"> • Maidstone Town Centre (990 units); • Invicta Park Barracks (1,300 units) • Lenham Rural (1,500 units) 	3,790
Windfall Contribution	1,600
Total	16,465

Figure 7: MBC Published Position for Plan Period 2011 -2031

- 5.1.4 In our view, these sources of supply are not sufficient to ensure the housing requirement is met. We set out our reasoning for this assumption below.

5.2 Local Plan Allocations

- 5.2.1 We consider that it is naïve on the part of the Council to assume that all draft allocation sites will come forward and that there is a need to build in some wider flexibility. Some of the identified allocations sites will inevitably become delayed, become unavailable, be deemed unviable when due diligence is carried out or will ultimately be secured in alternative uses.
- 5.2.2 Likewise, an allocation does not automatically mean that the permissions will be implemented or that existing uses will be displaced within the plan period and these sites do not provide the certainty of those that have genuine developers in control.
- 5.2.3 In light of the Government's desire to ensure Local Plans can be flexible and rapidly respond to change, it is essential that a cautious approach is adopted and that an over reliance on the proposed allocations does not prejudice other suitable sites from coming forward. Consequently, an industry standard 10% discount should be applied to the emerging allocations.

5.3 Broad Locations

5.3.1 The Council's decision to rely on Broad Locations as a core component of the housing land supply does not represent positive, effective or justified planning when genuinely sustainable and deliverable sites are available.

Maidstone Town Centre

5.3.2 Bearing in mind the limited remaining supply of brownfield sites, there is no genuine evidence available to demonstrate 990 additional homes will come forward in Maidstone town centre even with the level of low grade office accommodation that has been identified. The majority of legitimate opportunities have already been exhausted via the SHLAA process and suitable sites identified within policy H1.

5.3.3 Furthermore, to allow for 990 additional units in the town centre, plus a windfall allowance that averages 106 dwellings per annum over the remaining years of the plan period undoubtedly represents double counting.

5.3.4 For this reason we consider that if the broad location is to be retained in respect of Maidstone Town Centre, the subsequent windfall rates should be restricted accordingly.

Invicta Park Barracks

5.3.5 In respect of other Broad Locations, there also remains a lack of certainty regarding the long term future of Invicta Park Barracks and whether the site will become available for development (and certainly within the plan period). In this regard, it is noteworthy that on 6th September 2016 The Ministry of Defence (MOD) announced plans for an ambitious Estate Optimisation Strategy programme and the expected release of 13 sites that will contribute some £225 million toward the MOD's £1 billion target for land release sales and will contribute 17,017 homes.

5.3.6 The 13 sites subject to Estate Optimisation Strategy programme are listed below and exclude the Invicta Barracks site:

- RAF Henlow (Bedfordshire)
- Middlewick Ranges (Essex)
- Ampport House (Andover)
- Land at Harley Hill (Catterick)
- Chalgrove Airfield (Oxford) Transferred to the Homes and Communities Agency
- Colerne Airfield (Chippenham)
- Azimghur Barracks (Chippenham)
- Prince William of Gloucester Barracks (Grantham)
- Old Dalby (Melton Mowbray)
- Venning Barracks (Telford)
- Parsons Barracks (Donnington)
- Southwick Park (Fareham)
- Royal Marines Stonehouse (Plymouth)

- 5.3.7 Given this recent announcement, we retain the view that question marks exist regarding the timescales for release of the land. For this reason, if the site meets the tests of being suitable, available and achievable now it should be allocated and relied upon as a key component of the housing supply for this plan period. However, if the site cannot meet these tests, it should not be relied upon at the expense of other genuinely sustainable potential housing sites that would come forward.

Lenham Broad Location

- 5.3.8 Finally, we see no logical planning reason why the identification of adequate sites in or around Lenham has been delayed when more than sufficient land has been promoted during the evidence gathering process.
- 5.3.9 If sites promoted via the SHLAA process are not considered to be deliverable or developable to the degree that allocations can be made, the evidence does not exist to support that level of growth in Lenham and the 1,300 unit Broad Location component should be deleted from the overall housing land supply.

5.4 Windfall Allowance

- 5.4.1 We agree that some windfall sites are likely to continue at a modest rate during the plan period. However, we can see no genuine evidence base to rely upon them as a key component of the housing supply as they will be a reducing supply as brownfield land and other opportunities are increasingly used up. In this regard, the NPPF is very clear that LPAs may make an allowance for windfall sites only if they have compelling evidence that such sites have consistently become available in the local area and will continue to provide a reliable source of supply. Any allowance should be realistic having regard to the Strategic Housing Land Availability Assessment, historic windfall delivery rates and expected future trends, and should not include residential gardens.
- 5.4.2 Notwithstanding the advice of the NPPF, the age of the existing outdated development plan means that any historic delivery of windfall sites cannot be a robust basis to calculate a new allowance. In the absence of such evidence, windfalls should again be treated as a 'bonus' and should not be so heavily relied upon until such time as robust evidence of windfall generation against the new plan target/allocations has been established.
- 5.4.3 To ensure there is not an over reliance, windfall rates should be capped to 50 units per year for the later part of the plan period (for the period 2021 – 2031) whilst credible new evidence for an increased number can be collated. This is even more important given the Council has a duty to balance housing and economic needs as the Council simply cannot continue to allow the loss of employment sites to supplement housing need.

5.5 Summary of Updated Position

- 5.5.1 Based on the areas of doubt identified above, and to ensure an adequate degree of flexibility is built in, we consider the overall housing provision should be discounted as shown in Figure 8.

Component	MBC Published Position (units)
Extant Planning Permissions (after non implementation rate and (including resolutions to Grant Planning Permission)	5,475
Local Plan Allocations (5,400 units – 10% for non-delivery)	5,040
Broad Locations for Growth (including deletion of Invicta Park Barracks (1,300 units) but retention of Lenham Rural Area via site specific allocations (1,500 units) and Maidstone Town Centre (990 units))	2,490
Windfall Contribution (reduced to 50 units per annum 2021 to 2031)	500
Total	13,505
Shortfall	-2,195

Figure 8: DHA revised assessment of supply for the plan period 2011 -2031

5.6 Summary

- 5.6.1 The NPPF is clear that Local Plans should meet objectively assessed needs, with sufficient flexibility to adapt to rapid change. Whilst the Council has provided a list of sources of supply, much of this is speculative. For example, having regard to the unknown potential of Invicta Barracks, the high windfall allowance and the question marks surrounding the Broad Locations, 33% of the Council's supply is to be derived from unspecific sources. This is simply too high to ensure that the plan can respond if sites were not to come forward as planned.
- 5.6.2 In simple terms, to be justified the plan should be the most appropriate strategy, when considered against the reasonable alternatives and based on a proportionate evidence base. On the basis that there are other genuinely sustainable sites that are deliverable and developable during the plan period, a sound strategy would be to allocate these for development rather than rely on sites where the future is unclear.

6 Summary and Conclusion

6.1 Summary

- 6.1.1 At the heart of National Planning Policy is a presumption in favour of sustainable development and a desire to boost the supply of housing. Local Authorities must therefore use their evidence base to ensure that their Local Plan meets the full, objectively assessed needs for market and affordable housing. To do this authorities must identify and update annually a supply of specific deliverable sites sufficient to provide five years' worth of housing against their housing requirements.
- 6.1.2 The PPG is clear that where evidence in Local Plans has become outdated and policies in emerging plans are not yet capable of carrying sufficient weight, information provided in the latest full assessment of housing needs should be considered as the starting point for a five year supply calculation.
- 6.1.3 Paragraph 49 of the NPPF also states that relevant local policies for the supply of housing should not be considered up to date if the Local Planning Authority cannot demonstrate a five-year supply of deliverable housing sites.
- 6.1.4 Based on our assessment of the current supply components, we consider that the Council's position is far less secure than stated within the evidence that supports the emerging Local and that there is a current deficit of approximately 1,600 units against the up to date five year housing supply requirement and a deficit of 2,195 units for the plan period as a whole.
- 6.1.5 Taking this into account, Maidstone Borough Council cannot demonstrate a robust five year supply of housing land at present, nor would it be able to do so if the plan were adopted in its current form.

6.2 Implications for a Planning Application

- 6.2.1 As the Council cannot demonstrate a robust supply of housing land, the NPPF tells us that policies for the supply of housing cannot be considered up to date (paragraph 49) and that (paragraph 14) where the development plan is absent, silent or relevant policies are out-of-date, planning permission should be granted unless:
- *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole; or*
 - *specific policies in this Framework indicate development should be restricted.*
- 6.2.2 In the absence of a up to date housing policies, the decision maker must first ascertain whether there are specific policies in the Framework that indicate development should be restricted. For example, policies relating to sites protected under the Birds and Habitats Directives, designated as Sites of Special Scientific Interest; land designated as Green Belt or in an Area of Outstanding Natural Beauty. Where no such policy applies the planning balance becomes whether any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole

In this respect, the key passage within the presumption is the proposition that sustainable development means granting planning permission unless the adverse consequences of doing so significantly and demonstrably outweigh the benefits. It would be wrong in such cases to approach the Framework by applying a simple balancing exercise between positive and negative factors. Until the plan is up to date it is only proposals that have adverse effects markedly (“significantly”) outweighing the benefits overall and would constitute development that was unsustainable, that should not be granted. Paragraph 14 does not indicate that permission should be granted unless the balance was only a little bit against the grant of permission. Paragraph 14 is part of a pro development policy which has the effect of radically tilting the balance in favour of the grant of permission.

6.3 Overall Conclusion

- 6.3.1 The Council cannot currently demonstrate a sound five year supply of deliverable housing sites nor would it be able to do so if the emerging Local Plan were adopted in its current form. For this reason the presumption in favour of sustainable development is engaged.
- 6.3.2 From a wider perspective, the above assessment draws reason for significant concerns regarding the overall soundness of the emerging housing strategy.

1 Introduction

1.1 The purpose of this topic paper is to update the Council's housing land supply position to a base date of 1 April 2016, and to demonstrate that the Borough's objectively assessed housing needs can be delivered through the sites allocated in the Maidstone Borough Local Plan and the development management process. The topic paper aims to demonstrate that the housing land supply evidence is robust and to provide further evidence that the assumptions made by the Council are justified. It reviews the contribution made by outstanding planning permissions and proposed allocations to ascertain progress since the Local Plan base date of 1 April 2011.

1.2 Section 2 provides a summary of the Borough's objectively assessed housing needs and cross-references to documents that explain the steps the Council has undertaken to meet its needs. Section 3 shows how Maidstone's overall needs for market housing, affordable housing and registered care homes will be met, setting out the updated assumptions behind each of the components of housing land supply. A series of tables and methodologies explaining the source of data are included in Appendix A. The lists of sites contributing to the completed dwellings and extant permissions components of housing land supply are set out in Appendices B and C, respectively.

1.3 Appendix D includes an analysis of poorer quality office stock within the town centre.

1.4 Correspondence supporting the allocation of Invicta Park Barracks as a broad location for potential future housing growth is attached to Appendix E.

1.5 The methodology used to prepare the Council's housing trajectory is set out in Section 4, and the trajectory graph which demonstrates the delivery of dwellings against annual targets is shown in Appendix F. The assumptions behind the Council's five-year housing land position are explained in Section 5, and the rolling five-year supply calculations are set out in Appendix G. Section 6 explains how the delivery of the Borough's housing land supply will be monitored, and Section 7 draws together the conclusions of this topic paper.

2 Objectively assessed housing needs

Strategic Housing Market Assessment

2.1 The Strategic Housing Market Assessment (SHMA) was first published in January 2014 and has been reviewed and updated as new population and household projections from the Office for National Statistics (ONS) and Department for Communities and Local Government (DCLG) are released (SHMA Addendum in August 2014 and SHMA Update in June 2015). The assessment has been produced jointly with Maidstone's Housing Market Area partners: Ashford and Tonbridge & Malling Borough Councils. The SHMA is compliant with the National Planning Policy Framework and Practice Guidance, and the methodology used has withstood two independent critiques following a number of challenges that the objectively assessed housing need for the Borough was too high.

2.2 The iterations of the SHMA reported:

- January 2014 - an objectively assessed need for the Borough of 19,600 additional dwellings for the period 2011 to 2031 (980 dwellings per annum);
- August 2014 Addendum - a revised objectively assessed need for the Borough of 18,600 additional dwellings for the period 2011 to 2031 (930 dwellings per annum), and a need for 960 bedspaces between 2013 and 2031 to meet future care home needs (48 bedspaces per annum over the plan period); and
- June 2015 Addendum - a revised objectively assessed need for the Borough of 18,560 additional dwellings for the period 2011 to 2031 (928 dwellings per annum), and a revised need for 980 bedspaces between 2013 and 2031 to meet future care home needs (49 bedspaces per annum over the plan period).

Market forces

2.3 Planning Practice Guidance (PPG) states⁽¹⁾ that where market signals point to affordability problems, including access to affordable homes, an upwards adjustment should be made to increase housing numbers set at a reasonable level. In deriving the Borough's objectively assessed housing needs, the 2015 SHMA Update takes account of market forces, increasing household projections from 883 to 928 dwellings per annum.

London pressures

2.4 The 2015 SHMA Update also quantifies the increase in demand for housing that there would be if, as predicted by the Greater London Authority (GLA), migration from London is higher than projected by the ONS population projections. The influence of migration to/from London will continue to impact on the demand for housing in all south-east authorities to a greater or lesser degree. London is a world city generating a significant demand for additional workforce which in turn puts an upward pressure on housing. At this point in time, however, there is uncertainty about when and indeed whether the increased

1 PPG, Ref ID: 2a-019-20140306, paragraph 019

demand predicted by the GLA, above that already included in the ONS projections, will come to fruition. It is uncertain whether regional or sub-regional mechanisms will eventually emerge to address the complex issues raised within a consistent framework and what types of solutions may be instituted. Consequently, Maidstone's objectively assessed need does not include any uplift for the additional impacts of London migration predicted by the GLA (which would increase need by a further 45 units to 973 dwellings per annum). The recent election of a new London mayor may also herald a change in the approach to meeting the capital's housing needs.

Conclusion

2.5 The Council is satisfied that the methodology used to determine the Borough's objectively assessed housing needs set out in the SHMA is robust. Further that, as referred to in the Duty to Cooperate Statement, no additional housing needs have arisen from any of the adjoining local/unitary authorities.

Strategic Housing Land Availability Assessment

2.6 The combined report for the Strategic Housing and Economic Land Availability Assessment was published in January 2016. The combined report sets out the methodology for the identification and assessment of potential development sites, and includes detailed site appraisals together with a map of the Borough identifying accepted and rejected sites. The Assessment has informed the allocation of housing sites in the Local Plan, which assist in meeting the Borough's objectively assessed housing needs.

Sustainability Appraisal

2.7 The preparation of the Sustainability Appraisal for the Local Plan is an iterative process which helps to ensure that the Local Plan achieves an appropriate balance between environmental, economic and social objectives. All sites that formed part of the Strategic Housing Land Availability Assessment were subject to sustainability appraisal, which assisted in the selection of sites for allocation in the Maidstone Borough Local Plan.

Viability

2.8 Viability is key to the delivery of housing schemes. Peter Brett Associates have undertaken a series of viability studies to support the deliverability of both market and affordable housing policy alternatives⁽²⁾. The studies concluded that, overall, rural areas were more viable than urban areas, and within urban locations brownfield sites were less viable than greenfield sites. The assessments indicated that the Local Plan policies most likely to impact on residential viability were affordable housing and the delivery of infrastructure to support growth, and the studies concluded that policy trade-off decisions were required between the costs of infrastructure delivery and meeting affordable housing needs. The studies' recommendations have been incorporate into policies DM13 (Affordable Housing), ID1 (Infrastructure Delivery) and the H1 Housing Site Allocations of the Local Plan.

2 Local Plan Viability Testing 2013; Revised Plan and CIL Viability Study 2015; Revised Plan Viability and CIL Study (Affordable Housing) 2015

3 Delivery of housing sites

Housing land supply

3.1 Table 3.1 below updates Table 4.1 of the Regulation 19⁽³⁾ Publication draft version of the Maidstone Borough Local Plan (the Regulation 19 draft Local Plan) from a base date of 1 April 2015 to 1 April 2016, setting out the Council's housing land supply position over the 20-year plan period 2011 to 2031. All dwelling totals in the table are net of dwelling losses. Appendix A includes a series of tables and methodologies that explain the source of the data in Table 3.1.

3.2 Between 1 April 2015 and 1 April 2016 a further 521 homes have been completed (Appendix B), and the Council's stock of extant planning permissions (including those subject to the signing of Section 106 legal agreements⁽⁴⁾) of dwellings that have either not started or are under construction has risen to 5,475 dwellings (Appendix C), primarily due to the granting of planning permission on sites allocated in the Regulation 19 draft Local Plan. Consequently, the balance of Local Plan allocations has reduced to 5,600 dwellings. The development potential within allocated broad locations has risen by 290 units to 3,790 dwellings as a result of additional analyses undertaken for the town centre broad location. There is strong evidence that previously unidentified sites (windfalls) will continue to contribute towards the housing land supply and an allowance from this source has been added to supply.

3.3 Table 3.1 demonstrates a housing land supply of 19,325 dwellings (a surplus of 765 dwellings against the Borough's objectively assessed housing need of 18,560 units). Despite the step change required in housing provision, the Council is confident that objectively assessed housing need can be met through a flexible supply of housing sites and a surplus of over 4% above the assessed need.

	Housing land supply 1 April 2011 to 31 March 2031	Dwellings (net)	Dwellings (net)
1	Objectively assessed housing need/ Local Plan housing target		18,560
2	Completed dwellings 1 April 2011 to 31 March 2016	2,860	
3	Extant planning permissions as at 1 April 2016 (including a non-implementation discount)	5,475	
4	Local Plan allocated sites (balance of Regulation 19 Local Plan allocations not included in line 3 above)	5,600	
5	Local Plan broad locations for future housing development	3,790

Table 3.1 Meeting objectively assessed housing need

Completed dwellings (Table 3.1, line 2)

3.4 The total number of dwellings completed (net of losses) between 1 April 2011 and 31 March 2016 is 2,860 units (Table 3.2).

Year 1st April to 31st March	No. of Dwellings (net)
2015/16	521
2014/15	413
2013/14	423
2012/13	630
2011/12	873
Total dwellings completed 2011/2016	2,860

Table 3.2 Completed dwellings 1st April 2011 to 31st March 2016

3.5 During the first two years of the plan period when the South East Plan was in force, the target of 554 units was exceeded due to the availability of town centre brownfield sites that were being developed at a high density. Following the downturn in housebuilding during the economic recession dwelling completions have begun to rise, not least due to planning permissions granted generally on sites allocated in the Regulation 19 draft Local Plan in the context of a lack of a five-year housing land supply following publication of the SHMA in January 2014. A list of sites making up the completions is included in Appendix B.

Extant planning permissions (Table 3.1, line 3)

3.6 As at 1 April 2016, the total capacity of sites with extant planning permissions was 5,763 dwellings (Appendix A, Table 8.1). The figures include dwellings on approved prior notification applications and a small number of sites approved subject to section 106 agreements (247 dwellings). It is reasonable to expect that a proportion of these may not be implemented, although a total of 1,850 dwellings (32%) were on sites which were under construction and are highly likely to be built out.

3.7 Historic data reveals that over the past eight year period (2008/16) an average of 2.11% of dwellings on all sites with extant permissions expired in Maidstone Borough (Appendix A, Table 8.2). For the purposes of determining a non-implementation discount for current extant permissions a prudent approach has been adopted to avoid overestimating the yield from this source: a rate of 5% has been applied, reducing the contribution to housing land supply from this source to 5,475 dwellings.

Housing allocations (Table 3.1, line 4)

3.8 Table 3.3 below shows the progress of housing sites allocated in the Regulation 19 draft Local Plan at 1 April 2016 which had capacity for 8,707 dwellings. This total has been reduced by 41 units to 8,666 dwellings due to a proposed reduction in capacity for policy H1(29) New Line Learning (220 to 180 units) which is listed in the submitted Schedule of Proposed Changes, and the loss of one dwelling on policy H1(16) Slencrest House which was allocated for 10 units and permitted for nine.

Table 3.3

Broad locations (Table 3.1, line 5)

3.9 The Regulation 19 draft Local Plan identifies three broad locations for future housing growth:

- Town Centre (700 dwellings)
- Invicta Park Barracks (1,300 dwellings)
- Lenham Rural Service Centre (1,500 dwellings)

3 . Delivery of housing sites

Town Centre Broad Location

3.10 Evidence shows that there is an oversupply of poorer quality office stock in the town centre⁽⁵⁾ which is no longer fit for purpose due to age, condition, environs and a lack of parking facilities. A combination of reduced demand for office space (locally and nationally) together with the availability of new and better quality office accommodation in nearby areas (e.g. Kings Hill and Ashford) has the effect of suppressing demand for office accommodation in the Maidstone Town Centre, thereby inhibiting new development which could better meet modern business needs. A route to tackle this is to rationalise the supply of the poorest quality stock through conversion or redevelopment to alternative uses. Over the time frame of the plan it is expected that the value of the lowest quality office stock, in terms of rents, will fall further making redevelopment for alternative uses increasingly viable. With a corresponding uplift in the market for town centre apartments, this trend could see the delivery of significant new housing in and around the town centre.

3.11 Permitted development rights allowing the conversion of certain buildings to homes, first introduced on a three-year temporary basis in 2013, were made permanent on 6 April 2016⁽⁶⁾. This has clear implications for potentially increasing the future delivery of homes in the town centre. Table 8.3 (Appendix A) gives a breakdown of all prior notification applications by geographical area over the past three years. Out of a total 907 homes from this source of supply, the town centre (as defined in the Regulation 19 draft Local Plan) contributes 665 dwellings; 85% of these were in the identified poorer quality office stock.

3.12 An exercise has been undertaken to examine how much of the poorer office stock located within the town centre has been subject to conversion, and how much remains. The calculations and methodology applied are included in Appendix D. The potential additional capacity from the balance of poor quality office stock is likely to be in the region of 300+ dwellings. Additionally, there may be a dwelling contribution from the conversion of better quality office stock and retail premises. As well as the existing supply of 665 dwellings from prior notification sites, it is reasonable to expect this source of supply to contribute around a further 350 dwellings to the town centre broad location over the plan period.

3.13 In addition to the potential from prior notifications, there are medium and long term prospects of the redevelopment of larger sites in the town centre, such as Baltic Wharf and The Mall. Baltic Wharf has consent (2014 on appeal) for a scheme of retail, office and mixed use. Given the location and listed building status of the property, there is some doubt that a retail scheme would be viable. At the appeal a residential scheme comprising 240 units (115 units from conversion and 125 new build) was proposed and, although not considered viable at that time, improvements in the housing market may support the viability of a similar scheme in the medium term. Discussions between the Council and the landowners to review options for the site are ongoing. There is potential for the

5 Qualitative Employment Site Assessment 2014, GVA

6 Town and Country Planning (General Permitted Development) (England) (Amendment) Order 2016

site to deliver around 240 dwellings within the town centre. There are likely to be other redevelopment schemes within the town centre which include a residential component over the remaining plan period.

3.14 In February 2014 a public exhibition was held by the owners of the Mall for a potential redevelopment scheme for [The Mall](#) and its surrounds. An area was earmarked for substantial housing redevelopment which could have yielded in excess of 400 dwellings. In addition, there may be opportunities to intensify the existing built development of The Mall buildings themselves. Discussions between the Council and the landowner to consider the various options are ongoing, and The Mall has confirmed its intention to include a residential element in its long-term plans for redeveloping the site.

3.15 The recent trend of Prior Notification applications for Class Q of Part 3 permitted development proposals to redevelopment of poorer quality office stock, together with discussions with site owners, provides a reasonable basis for the Council's confidence that the potential yield within the Town Centre broad location should be increased to a total of 990 dwellings.

Invicta Park Barracks Broad Location

3.16 The broad location at Invicta Park Barracks comprises a range of military buildings, including army accommodation, set within expansive parkland. The Ministry of Defence (MoD) has categorised the site as a 'retained' site in its most recent estates review (2013) and, whilst there are no immediate plans to vacate the site, the MoD keeps its property portfolio under regular review. Recent correspondence from the Defence Infrastructure Organisation of the MoD confirms it supports the inclusion of Invicta Park Barracks in Policy H2(2) for potential future housing growth (Appendix E). Preliminary site visits indicate potential to deliver approximately 1,300 homes in the latter period of the Local Plan (2026 to 2031), and the next step will be an assessment of potential development options for the site.

Lenham Rural Service Centre Broad Location

3.17 The broad location at Lenham Rural Service Centre is allocated towards the end of the plan period (2026 to 2031), so that requirements for supporting infrastructure and mitigation measures can be addressed, and to ensure future development is integrated into the existing village through the preparation of a master plan. Consultants have been appointed to explore the potential for growth at the village, and a stakeholder workshop was held on 15 April 2016 to seek the views of the Lenham Neighbourhood Plan Steering Group and parish councillors, local land owners, developers and their advisors, representatives of local organisations, and officers from the Borough and County Councils. An initial report has been published: Exploration of the 'Broad Location' Allocation at Lenham Village, Kent (2016) which reviews the potential for growth at the village. Early indications are that 1,500 dwellings could be delivered in this broad location towards the end of the Local Plan period, and additional studies will be undertaken to understand the potential impacts from growth, including infrastructure needs, and the precise capacity of different areas.

Windfall sites contribution (Table 3.1, line 6)

3.18 In accordance with paragraph 48 of the National Planning Policy Framework (NPPF), local planning authorities may make an allowance for windfall sites if there is compelling evidence that such sites have consistently become available in the local area and will continue to provide a reliable source of supply. Any allowance should be realistic having regard to the Strategic Housing Land Availability Assessment, historic windfall delivery rates and expected future trends, and should not include residential gardens.

3.19 Based on an examination of completed dwellings on previously developed (brownfield) small sites (1 to 4 units) and large sites (5+ units) there is strong evidence of a regular and continuing supply of windfall sites in the Borough. Sites that have previously been identified through the Local Plan process have been removed from calculations, i.e. sites identified in the adopted Maidstone Borough-wide Local Plan 2000, Urban Capacity Studies 2002 and 2006, and the Strategic Housing Land Availability Assessment (2016 combined report). Garden land has been excluded from figures in accordance with the NPPF. Sites within the town centre have also been excluded as otherwise this would result in double counting the Town Centre Broad Location contribution.

3.20 Table 8.4 (Appendix A) demonstrates that, over the past eight years, the average annual windfall rate for small sites has been 48 dwellings and for large sites 136 dwellings. The supply from small sites has been fairly consistent and, since sites below five units are not allocated in the Local Plan, it is reasonable to expect this rate to continue during the plan period from 2019/20. Prior to this date there is a risk of double counting the windfall sites with planning permission and these early years have therefore been excluded.

3.21 For large sites, there are a number of factors that affect the setting of a realistic future rate for large windfall sites: sites have been allocated in the Local Plan, so fewer sites will be "unidentified" in the short to medium term. The Council has therefore exercised caution and has assumed no large site windfalls over the next five years. After that it is reasonable to assume that the 'call for sites' exercise would not have revealed all medium to long term opportunities and so the Council has applied 50% of the average past windfall rate (68 dwellings per annum) for the period 2021/2026, and 100% (136 dwellings per annum) for the period 2026/2031 (Appendix A, Table 8.4).

3.22 Although dwellings built on garden land have been excluded from site forecasts in accordance with NPPF requirements, such sites continue to deliver an average of 28 dwellings per annum in Maidstone (Appendix A, Table 8.5), so could deliver 280 units over a 10-year period under the enabling Local Plan policy DM10. Forecasts also exclude local needs housing delivery on exception sites. Build rates will fluctuate due to the nature of this type of housing provision (Appendix A, Table 8.6) but, based on historic trends and current activity with the Housing Service, exception sites could reasonably be expected to deliver an additional 100 dwellings over the remainder of the plan period. Excluding these two sources from the Council's housing land supply forecasts introduces additional flexibility in supply.

Conclusion: meeting objectively assessed housing needs

3.23 In conclusion,

- The Council has taken on the significant rise in the objectively assessed housing need in the Borough;
- The Council is making excellent progress early in the plan period at meeting this need with 45% of the identified need already committed as completed dwellings or planning permissions granted (and in many cases commenced);
- The Council has taken a reasonable position on discounting planning permissions;
- The Council has allocated further suitable sites for development where applications are pending on a significant proportion (2,240 units, representing 12% of objectively assessed needs), with discussions with developers underway on further sites;
- The Council has also taken a relatively cautious but evidence based approach concerning the delivery of windfall sites and development within the identified broad locations; and
- Overall, the Council is confident that the objectively assessed housing need will be delivered through the policies and allocations of the Local Plan.

Affordable housing delivery

3.24 The Strategic Housing Market Assessment Update (2015) identifies an affordable housing need for the Borough of 5,800 dwellings from 2013 to 2031 (322 dwellings per annum over 18 years). Between 1 April 2013 and 31 March 2016, 491 affordable homes were completed (Appendix A, Table 8.7). Table 3.4 below demonstrates the Council's affordable dwelling supply.

3.25 Prior notification applications and small site windfalls (1 to 4 units) do not attract affordable housing and are excluded from figures, although the table includes an estimated contribution from local needs housing delivery on exception sites over the plan period (100 dwellings).

Affordable housing land supply 1 April 2013 to 31 March 2031	Dwellings (net)	Dwellings (net)
Objectively assessed affordable housing need		5,800
Completed affordable dwellings 1 April 2013 to 31 March 2016	491	
Contribution from extant planning permissions as at 1 April 2016 (including a non-implementation discount)	1,471	
Contribution from Local Plan allocated sites	1,800	

Affordable housing land supply 1 April 2013 to 31 March 2031	Dwellings (net)	Dwellings (net)
Contribution from Local Plan broad locations for housing development	1,182	
Windfall sites contribution (large sites of 5+ dwellings only)	306	
Contribution from local needs housing (exception sites)	100	
Total affordable housing land supply		5,350

Table 3.4 Delivery of affordable housing 2013 to 2031

3.26 The SHMA (2015 Update) recognises that not all affordable housing will be delivered through planning obligations on market-led development schemes. In particular, it cites the significant role of the private rented sector in Maidstone Borough. Similarly, it is reasonable to expect a proportion of 100% affordable housing where the developer is a registered provider of social housing.

3.27 Finally, the Council is aware that provisions contained within the Housing and Planning Bill which is currently passing through the House of Lords, including starter homes as part of affordable housing supply, may change the assumptions of provision.

3.28 At this stage, the Council is confident that the identified need for affordable housing can be met through the application of policies DM13 and DM14 as well as the actions of the registered providers of social housing and the private sector.

Registered Care Homes

3.29 The Strategic Housing Market Assessment Update (2015) identifies a need for a total of 980 registered care bedspaces over the plan period 2011 to 2031 (49 bedspaces per annum). Table 3.5 below sets out the Council's current position (all figures are net of losses of bedspaces).

Care homes bedspaces 1 April 2011 to 31 March 2031	Bedspaces (net)	Bedspaces (net)
Objectively assessed need		980
Completed bedspaces 1 April 2011 to 31 March 2016	42	
Bedspaces under construction at 1 April 2016	31	
Bedspaces on extant planning permissions at 1 April 2016	316	
		389

Table 3.5 Registered care homes - bedspaces

3.30 The Council has made good progress on the delivery of the identified need and has eight years' supply of registered care homes bedspaces (980/49 bedspaces per annum). On this basis the Council considers that the need identified for the remainder of the plan period can be met and the provision of this specialist accommodation will be closely monitored.

4 The housing trajectory

Methodology

4.1 The Council's housing land supply is updated annually to a base date of 1 April, and new sites granted planning permission in the preceding year are added to the Council's monitoring database. The database holds information on market and affordable housing, permanent Gypsy and Traveller sites and prior notification applications. At 1 April 2016 the Maidstone Borough Local Plan housing allocations were also added to the database. A Borough-wide survey of all sites (down to one unit) is undertaken to establish how many dwellings have been built in that year or are under construction, and the information is uploaded to the database. Analyses of the data are undertaken, including the projected phasing of individual sites.

4.2 To assist with the projected phasing exercise, contact was made with landowners, developers and their agents for all permitted and allocated sites of five units and above (Table 4.1). A minimum of three contact attempts was made and the feedback received was of a good standard.

	Percentage of sites - feedback received through contacts	Percentage of sites - no feedback through contacts	Percentage of sites - unable to make contact
Sites with extant planning permissions	55%	29%	16%
Local Plan allocated sites	65%	20%	15%
Total	59%	25%	16%

Table 4.1 Development industry feedback on phasing of sites of 5+ dwellings

4.3 In addition to contact with the development industry to establish the projected phasing of development sites, there has been regular input to the Local Plan process through the Council's 'call for sites' exercises, the SHLAA process and formal Local Plan consultations, all of which have helped to inform the allocation of development sites in the Local Plan. Regular discussions with the industry occur through the Kent Planning Officers Group, the Borough Council's biannual Development Industry Forum, and pre-application discussions.

4.4 The Council's housing land supply comprises dwellings completed between 1 April 2011 (the base date of the Local Plan) and 31 March 2016; extant planning permissions (discounted by 5%) together with those granted permission subject to the signing of section 106 agreements; sites allocated in the Maidstone Borough Local Plan; broad locations for future housing development identified in the Local Plan; and an allowance from estimated windfall sites. Care has been taken to avoid double counting across the various elements of supply.

4.5 Table 3.1 sets out the Council's overall housing land supply position. The housing trajectory (Appendix F) shows completed and projected dwellings, phased on an annual basis, for each component of supply over the plan period.

4.6 The Council is making good progress through increases in the number of completed dwellings and the pipeline of planning permissions. It is confident of continuing to deliver housing sites in line with the trajectory following close liaison with the development industry on a site by site basis. Past rates of delivery, together with the opportunities and policy framework for the continued delivery of windfalls (including prior notifications in the town centre broad location), give further confidence in the housing trajectory. The Council is developing master plans to support the implementation of the Lenham and Invicta Park Barracks broad locations. Given the progress made to date on meeting the objectively assessed housing need and the contact with the development industry, the Council believes the housing trajectory to be realistic in profile but will continue to monitor its progress.

5 Five-year housing land supply

Methodology

5.1 NPPF paragraph 47 is clear that local authorities should identify and update annually a five-year housing land supply of deliverable sites. There is no standard methodology for this calculation, and the Council's approach to establishing its five-year supply at 1 April 2016 is set out below. The methodology is PPG-compliant in that it delivers the under-supply of dwellings in the past five years over the next five years, and demonstrates a surplus of 155 dwellings (Table 5.1). This represents 5.12 years' worth of housing land supply at 1 April 2016⁽⁷⁾.

		Dwellings (net)
1	Requirement 1 April 2011 to 31 March 2021 928 dwellings p.a. x 10 years	9,280
2	Number of dwellings completed 1 April 2011 to 31 March 2016 (Appendix B)	(2,860)
3	Residual requirement 1 April 2016 to 31 March 2021 (line 1 - line 2)	6,420
4	5% buffer against potential non-delivery (5% of 6,420)	321
5	Total requirement 1 April 2016 to 31 March 2021 (line 3 + line 4)	6,741
6	Total land supply 1 April 2016 to 31 March 2021 (Appendix G)	6,896
7	Surplus in delivery 1 April 2016 to 31 March 2021 (line 5 - line 6)	155

Table 5.1 Five-year housing land supply at 1 April 2016

Completed dwellings (Table 5.1, line 2)

5.2 Appendix B lists the sites that contribute to total completions between 1 April 2011 and 31 March 2016 which total 2,860 dwellings.

5% Buffer (Table 5.1, line 4)

5.3 Policy AOSR6 of the Regional Strategy for the South East, the [South East Plan](#) (2009), set an annual dwelling target for Maidstone of 554 units, and the Strategy was not revoked (in part) until March 2013. The Maidstone Strategic

⁷ Calculation: $6,741 \div 5 = 1,348$; $6,896 \div 1,348 = 5.12$

Housing Market Assessment was first published in January 2014 and established an objectively assessed need for the Borough of 980 dwellings per annum for the period 2011 to 2031, subsequently reduced to 928 dwellings following updated national household projections in 2015. Table 8.8 (Appendix A) demonstrates that the Council has an excellent record of meeting its housing targets, even during periods of recession, up to the point that objectively assessed needs were increased by 68% (retrospectively applied).

5.4 It is therefore reasonable to apply a 5% buffer to the Council's residual housing requirement, brought forward from the latter years of the plan in order to introduce additional flexibility in the delivery of five years' worth of housing sites. This buffer is in addition to the non-implementation discount applied to extant permissions.

Five-year housing land supply (Table 5.1, line 6)

5.5 Following a detailed sites survey, the Council's housing information database is updated to a base date of 1 April each year. The housing land supply phased for the five year period from 1 April 2016 to 31 March 2021 totals 6,896 dwellings (Appendix G). The supply includes a proportion of dwellings from the discounted stock of extant planning permissions and Local Plan allocations (Appendix C), and a contribution from small site (1-4 units) windfalls for 2019/20 and 2020/21 as explained in paragraph 3.20.

Rolling five-year housing land supply

5.6 Following a considerable increase in the Borough's objectively assessed housing needs, applied retrospectively to 1 April 2011, the Council has made every effort to deliver the shortfall in housing land supply (2011/16) over the next five years (2016/21). The calculation in Table 5.1 reveals a surplus of dwellings at 1 April 2016 of 155 units. To demonstrate the Council can maintain a five-year supply over the plan period, the rolling five-year housing land supply is set out in Appendix G.

6 Monitoring and review

6.1 In line with standard practice, a review of the success of Local Plan policies will be undertaken in annual monitoring reports.

Objectively assessed needs

6.2 The Council will monitor new releases of population and household projections from ONS/DCLG, and will assess the impact of new figures on the Borough's objectively assessed needs and respond accordingly.

Monitoring the delivery of market and affordable dwellings and the delivery of bedspaces in care homes

6.3 The Council will undertake effective monitoring of the Borough's housing trajectory and five-year housing land supply position, together with the delivery of affordable housing and bedspaces in registered care homes, to ensure objectively assessed needs are being met. The Council's database will be updated annually (at a base date of 1 April) following completion of detailed site surveys, and the results will be published on the Council's website in annual monitoring reports.

Broad locations for future housing growth

6.4 Recent analyses, set out in Section 3 of this Topic Paper, demonstrates how the town centre broad location for future housing growth could be delivered. The masterplanning for the broad locations of Invicta Park Barracks and Lenham Rural Service Centre are in progress. The delivery of all three broad locations will be carefully monitored. Lenham will be the prime focus for a partial review of the Local Plan through the preparation of a Development Plan Document, to establish the boundaries of the broad location and to allocate specific sites for development.

7 Conclusion

7.1 Overall, housing land supply exceeds the objectively assessed housing need of 18,560 dwellings (2011 to 2031) by over 4%, despite the step change required in housing provision and the cautious evidence based approach applied to each component of housing provision. Every effort has been made to deliver the past under-supply of dwellings within the next five years, and the housing trajectory demonstrates that the Council can maintain a rolling five-year supply of housing land to meet needs over the period of the plan.

7.2 At this stage, the Council is confident that the identified need of 5,800 affordable dwellings can be met almost entirely (92%) through the application of policies DM13 and DM14 which will be supplemented by the actions of the registered providers of social housing and the private sector

7.3 The Council's objectively assessed need for registered care homes is 980 bedspaces, and 389 bedspaces can be delivered through completions and permissions on sites, representing eight years' worth of bedspaces to meet this specialist need. Given the good progress on the delivery of the identified need it is likely that the remaining need will be met in the plan period and the Council will monitor the position closely.

7.4 The Council is confident that its objectively assessed needs set out in the Strategic Housing Market Assessment Update 2015 will be delivered through the policies and land allocations of the Maidstone Borough Local Plan.

Table 8.9 List of sites making up completions

Appendix C List of extant planning permissions and allocations

8.1 The following tables list the number of dwellings (net of losses) on sites that contribute towards housing land supply. The figures exclude the non-implementation discount for extant permissions for individual sites. The total number of dwellings discounted for non-implementation are quoted at the end of the extant planning permission table. The 'status' column indicates whether planning applications are full, outline or prior notifications (PN); where permission has been granted subject to the signing of section 106 agreements; and where an application for a Local Plan allocation is pending a decision. The 'feedback' column confirms where phasing on large sites (5+ dwellings) has been guided by feedback from landowners and developers, or their agents. A 'yes' indicates positive feedback; and a 'no' indicates contact was made but the phasing of sites was unknown. The blank cells for large sites indicate where, following three attempts, contact had been unsuccessful.

Table 8.11 List of Local Plan allocations phased by 5-year periods

Appendix D Analysis of poorer quality office stock in the town centre

8.2 Planning consents were checked for all sites identified in the GVA Qualitative Employment Site Assessments, Appendix V Town Centre Office Map & Stock Observations as poor. Where floorspace was not available from the GVA assessment, data was obtained from the council's economic development team and through internet searches. The quantity of floorspace within poor quality office stock that has been, or was in the process of being converted to residential was identified. This enabled identification of the remaining floorspace capacity on sites of poor quality, excluding floors currently in use for retail or other non office use. The quantities of dwellings for each site with planning consent were used to gain an average dwelling size. The average dwelling size was then applied to the available floor space to identify potential dwelling capacity, and a 10% reduction was applied to allow for access and site amenities.

18 May 2016

Dear Ms Parks
Maidstone Borough Plan
Publication Draft (Regulation 19)
Policy H2 (2)
Invicta Park Barracks, Maidstone

Thank you very much for meeting myself and colleagues from Carter Jonas on 4 May. It was good to talk through the Maidstone Borough Plan and discuss the future development potential of Invicta Park Barracks with you and your colleagues.

The barracks is being studied in the context of the UK Footprint Strategy for Defence which is an estate wide departmental asset review, the aim of which is to create a smaller and better estate that effectively supports and serves the needs of our armed forces.

A number of sites are being looked at as part of the work on the Footprint Strategy. This barracks, which is in the urban area, may be one where the operations could be relocated elsewhere in the UK portfolio.

In the light of the work we are doing, DIO is very pleased to see the inclusion of the Barracks in the draft Local Plan for residential led development for up to 1300 units. Our Strategy and its likely programme are due to be reported in the Autumn of this year and in the interim the site should continue to be allocated.

At our meeting we shared with you the work that has been completed to date and the emerging illustrative proposals for the site. Housing units which come forward on the site will count towards MoD targets for housing and also deliver part of Maidstone Borough Council's housing allocation in the plan period.

Our work will continue over the next few months and as agreed we should look to meet again in the near future, to discuss the local plan progress and our work on the site.

I will contact you again once our study has concluded but in the meantime please do not hesitate to contact me if you have any further questions.

My thanks once again for your time on 4 May.

Yours Sincerely

Louise Spalding
Senior Town Planner
